

eds Access Control

The Service Provider

Access Control

Secured by Design

Are your premises really secure?

Do you know who is entering or leaving your premises?

Is it time to review your existing security?

Control is required, in the form of Access Control, there are currently many differing types of systems available on the market and making an informed decision on what level of security for your premises can be a daunting process. **EDS** can provide you with the knowledge to secure your environment, meet your expectations and provide a system within your budget – whatever your application.

Choice

Integration

From basic mechanical push-button devices to electronic keypads, swipe card and hands-free or biometric (fingerprint & Iris) recognition systems, we are able to use our many years experience to provide you with the right system from the start. PC integration providing the final link in the system, allowing you total control and provide the information you require, instantly.

Available Technologies

Keypad Technology is the most basic form of Access Control with codes or pin numbers, can either be retained within the unit or programmed remotely from a central control unit. Operating one or many doors the codes can be changed and reprogrammed instantly.

Swipe Cards affords a more reliable and higher level of security than keypads, with the cards programmed into the individual units or programmed remotely from a central control unit. Credit card style, which can be overprinted with your company name & logo and picture of the individual.

Proximity Cards & Tags can be used to provide non-contact reading technology, nothing to wear out and can be keyring or credit card style. Vandal resistant units are available for high security or high traffic applications.

Networked the majority of systems we currently install are PC network linked, where the system can be connected to a local PC or linked into the buildings existing computer network, allowing multiple users access to the reports and events contained within the system. Security is paramount, therefore the system features high security encryption and is fully password protected.

Integration all the technologies can be integrated into many third party devices, such as barriers, rising kerbs, roller shutters, security doors, security & safety systems and cashless vending systems, without the need for additional cards.

Total Security EDS also provides Physical Security in the form of Rising Kerbs, Barriers, Gates, Roller Shutters, Grills & Bollards. Electronic Security such as CCTV Camera Systems, Intruder and Fire Alarm Systems all linked together using our Building Management control systems and integrating into PC Networks – seamlessly.
