Window security grilles and door security grilles offer the ultimate protection against intruders are simple to use and look good, a security grill has major security, safety and appearance advantages over other types of physical security like roller shutters and fixed bars and grilles. Window security grilles and door security grilles stop burglaries by physically protecting windows and doors.

The security grille is a major breakthrough in the fight against residential & commercial break-ins. It is now widely accepted by Crime Prevention Officers and the insurance industry, that the only way to stop burglaries is to physically protect doors and windows.

- 
- High Security
  - Very Visible Deterrent
  - Fast Operation
  - Open & Closing Grilles
  - High Secure Locking Available
  - Designed with Security Built-In

---

We have a complete range of grilles to suit your security requirement from simple windows & doors to whole entrances and office blocks, all grilles are manufactured to standard sizing, with unique applications being custom built, installation is usually a day or two depending on the size of the premises. Most installations do not require any planning permission as they are removable and installed within your premises, they provide a quick and simple answer to the rise in thefts.

The grilles are made from steel sections which are joined together in a way which allows the grilles to slide out of sight either behind blinds or curtains, this gives maximum light penetration into any area during the day, and at night very simply the gates can be pulled together and locked. The grilles can be made to have a hinged lift up track to combat trip hazards in doorways.
